NavTac

Tactile guidance
with temporary road marking tapes

Safety in temporary exceptional situations

Roadworks in urban areas pose a major challenge for people with visual impairments. The sudden interruption of permanently installed guidance markings often leads to disorientation and an increased risk of accidents.

NavTac can be used in a variety of ways and precisely marks obstacles and danger spots to enable people with visual impairments to orientate themselves clearly and safely - for example at

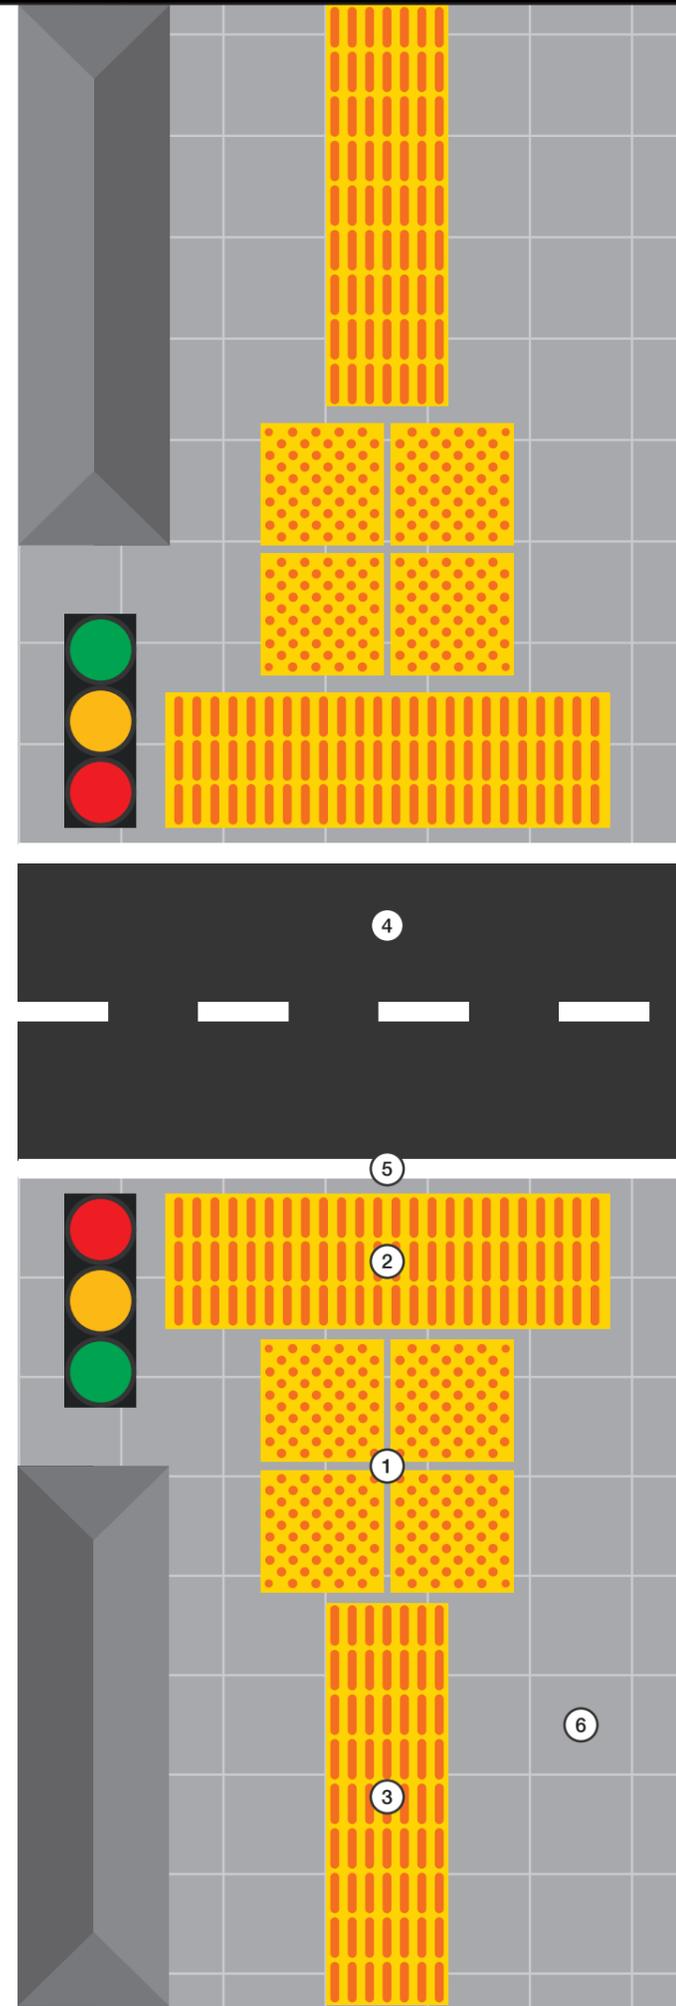

- Temporary relocation of public transport stops of local public transport services
- Temporary changes to routing due to events (e.g. trade fairs, sporting events, city festivals)
- Construction sites and obstacles in the pedestrian area
- Temporarily placed pedestrian traffic lights

The orange NavTac road markings tapes also sensitise other road users not to place obstacles such as e-scooters or rubbish bins near guidance fields for visually impaired people.

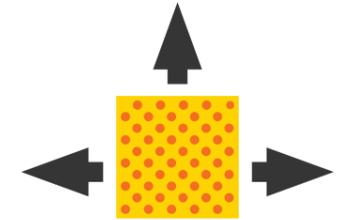

NavTac

Advantages of temporary road marking tapes:

-  **Quick application and easy removal:**
Thanks to our innovative adhesive technology, the tapes can be applied in a very short time and removed just as quickly without leaving any residue.
-  **Available in various lengths:**
Our Tapes are available in different lengths, widths and colours to ensure maximum flexibility and adaptability to any construction site situation.
-  **Slip resistance:**
The non-slip surface provides a secure grip, even in wet and adverse weather conditions.
-  **Ideal for Asphalt, Pavers, and Concrete:**
The NavTac road marking tape is suitable for various solid surfaces, providing reliable guidance.

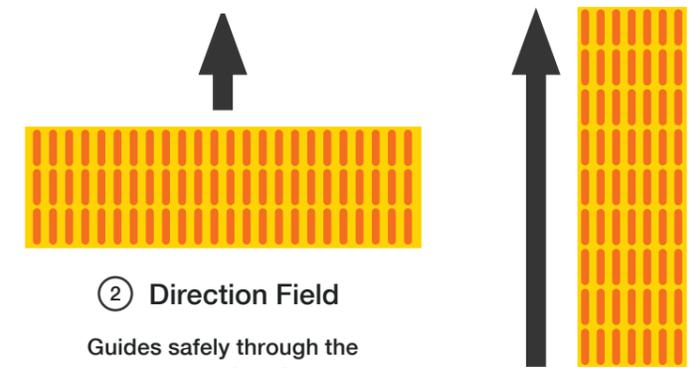

NavTac Dots

① **Attention Field**
Provides early warning of danger zones and alerts to potential hazards.

The specially developed studs provide immediate tactile feedback, signalling danger zones at an early stage and increasing road users' awareness.

NavTac Lines

② **Direction Field**
Guides safely through the construction site.

Guidance Field ③
Signals transitions, marks the road, and indicates the direction.

Precisely designed longitudinal ribs, oriented **horizontally** and **vertically**, create a clear, tactile guidance line that ensures safe navigation.
